

CHEMICAL

Fat capsules for (double) encapsulation

THE APPLICATION SCOPE / PURPOSE

Paraffin wax is solid at room temperature and melts at higher temperatures, thus paraffin wax can be emulsified in liquid form, providing an optimal system for encapsulating active ingredients or moisturizers. The controlled cooling of the emulsion produces paraffin capsules, which are ideal for adding to lipsticks, vaseline or ointments. Kinematica offers dispersing solutions with controlled temperature regulation for the optimal production of fat capsules or double capsules with a second internal phase.
