LIFE SCIENCE

Rat liver homogenization

THE APPLICATION SCOPE / PURPOSE

Rats have been used for more than 200 years in cancer and behavioral research and for nutritional studies. The effectiveness and safety of drugs is often tested on rats. They are ideally suited because all human genes that can cause disease have also been found in the rat genome. Disease cells, pathogens or tumor cells of the liver can be identified and analyzed. Therefore, sample preparation with efficient homogenization of the liver tissue is essential. Kinematica has solutions and experience for this application.
