**HOMOGENIZATION
PILLS
POLYTRON®**

PHARMACEUTICAL

Hard and rubbery pills crushed in seconds

THE APPLICATION SCOPE / PURPOSE

Homogenization of pills is an important step for pharmaceutical analysis. Often the pills are very hard and as soon as they come in contact with a liquid, they become soft or even rubbery, which makes the disintegration even more difficult. Sample size and time are very important factors, in order to work efficiently and accurately. Kinematica offers tailor-made solutions for homogenizing tablet samples. The long experience pays off in the variety of aggregates.
